

# Temperature Mapping Made Simple

Monitoring environmental conditions in a warehouse is time consuming and difficult at scale. As loggers are often in hard-to-reach locations, setting them up, downloading data one by one, and preparing audit reports becomes a significant operational burden.

To reduce product loss, improve efficiency, and maintain compliance, a reliable temperature monitoring solution is essential.

## Solution

**Save alarm settings and apply them to multiple loggers at once**

**Download data without removing loggers from their location**

**Easy reporting as no manual data uploading needed**

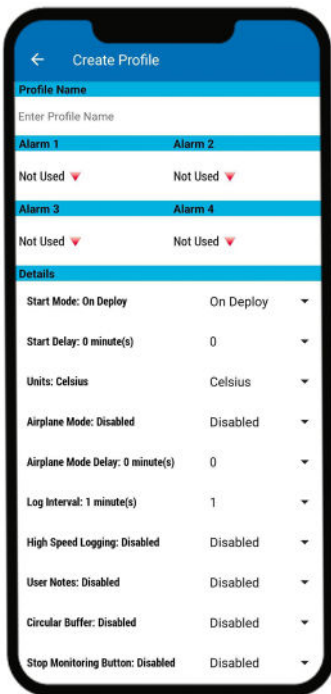

**Reduce  
Temperature  
Mapping Admin**

# Streamline Setup and Reporting

## Batch Alarm Settings

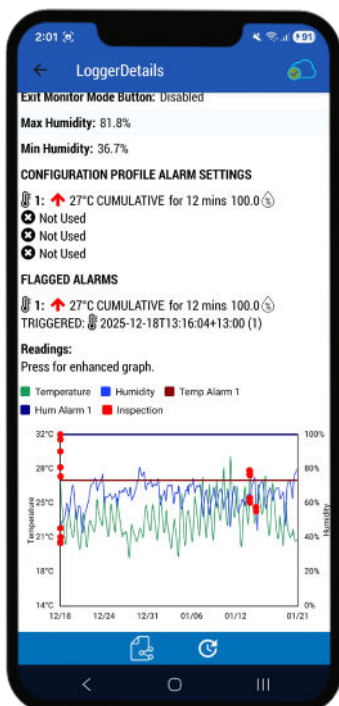

Setting up many loggers individually with the same alarm settings is long and inefficient. Using the HAXO-16BT with its companion mobile app, LogTag® Link simplifies this process. Simply create a configuration profile and wirelessly apply it to multiple loggers at once.

## Check Your Data Anytime

Checking warehouse temperature in the middle of a run is often challenging. Our mobile app enables you to view readings without removing the logger from hard-to-reach locations. It detects nearby loggers and displays their latest readings with a **red** warning when readings are out of range.

Knowing which logger you are viewing helps speed up the identification of problem zones. You can easily name each logger to help identify them in the mobile app. This enables timely corrective action without disrupting normal workflow.

## Batch Download in a Few Taps

The data and generated reports can be easily downloaded as a batch, and shared from your mobile device with a few taps. Reports are automatically uploaded to your LogTag® Online cloud account. This simplifies the process and reduces manual work for mapping reports.

## Handle more loggers with fewer steps
