

Protect Vaccines During Your Tote Transportation

Life-saving vaccines often face risk during transportation, whether across long distances or in daily deliveries. The high cost and complexity of delivery make every shipment critical, even just a daily delivery. Maintaining vaccine integrity is essential, yet opening the tote to check conditions risks reducing vaccine efficacy. Without a reliable way to monitor conditions continuously and access data easily, both vaccine quality and operational efficiency are at risk.

Solution

**Protect
Product Integrity**

Check vaccine conditions anytime on your mobile device without opening the tote

Eliminate unnecessary tote checks during transportation

**Automated
Compliance**

Reporting is automatically sent to key staff when data is downloaded in the app

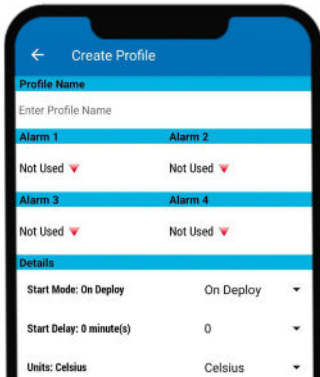

Streamline compliance, reduce manual steps, minimize human error

**Protect your vaccines.
Eliminate manual
reporting.**

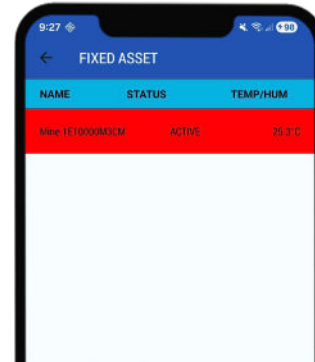

Vaccine Journey with HAXO-16BT

1 Packing Your Tote

When packing the vaccine tote, place the HAXO-16BT inside with the vaccines. Configure it in seconds on your phone with the mobile app. Simply apply the saved alarm settings, then the logger will start logging.

2 View Latest Recordings During Transportation

While you are traveling with your tote, you can check the latest logger reading without opening it. This helps protect vaccine integrity during the journey. Simply open the app to view the logger readings, and a **red** warning will appear if an alarm has been triggered.

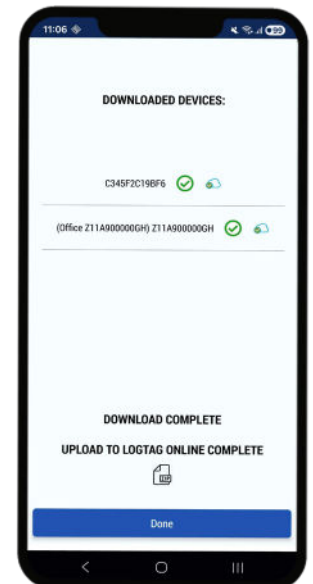

3 During Vaccination Program

While you are retrieving the vaccines, you can view on-screen status. You can view data at a glance and take action if needed.

4 Audit Report Ready when Vaccine Program Completed

Once the vaccination program is complete, the data and generated reports can be downloaded and shared directly from your phone. Audit ready reports are automatically uploaded to the cloud, helping your team keep records organized and ready for review.

Protecting your vaccines just got easier with cost effective automation.
